

Subject: CC - 310 WAD – II PHP Practical programs

- Q1. Write a PHP program to find factorial of entered number.
- Q2. Write a PHP program to print table of entered number.
- Q3. Write a PHP program to create database "PRODUCT" and create table "category" in it. (do not use wizard)
- Q4. Write a PHP program to create table "EMPLOYEE" and insert records in it.
- Q5. Create a form containing a combobox with some product names as items. Whenever a user selects a particular product from the combobox, it should be sent to the server asynchronously (i.e. without pressing submit button). Implement using AJAX.
- Q6. Create a PHP program to reverse the string (Use AJAX)
- Q7. Write a PHP program of sending items selected from radio to server asynchronously. (Use AJAX)
- Q8. Write a program that checks a particular studId already exist in the student (studId, stu_name, mobileno, country) table or not.
- If studId exists then display a message "User Already Exit. Try another stuld".
- If it does not exists then add the data in the student table.
- ***Implement using AJAX.
- Q9. Create a form containing one input field(Pro_id) and a search button. When the user clicks on the Search button a PHP script should get executed and should display the details of the product for the Pro_id specified. (table Product : pro_id, pro_name, pro_price, pro_qty)
- Q10. Create a form containing one input field(Pro_id) and a Delete button. When the user clicks on the Delete button a PHP script should get executed and should delete the record of the product for the Pro_id specified. (table Product : pro_id, pro_name, pro_price, pro_qty)
- Q11. Create a form containing four input fields(Pro_id, Pro_name, Pro_price, QOH) and Submit button. When the user clicks on the submit button an PHP script should be executed which inserts the record in the product table.
- Q12. Write a PHP program to find factorial of entered number. (Use AJAX)
